

Devanshu Chicholikar

Boston, MA

(857)339-8803 | chicholikar.d@northeastern.edu | [LinkedIn](#) | [Github](#) | [Personal Website](#)

Summary

Cloud-focused Software Engineer with expertise in building scalable, resilient applications using AWS infrastructure and modern JavaScript frameworks. Experienced in automating deployment pipelines, implementing Infrastructure as Code, and optimizing system performance through effective monitoring and continuous improvement practices

Education

Northeastern University

Expected 2026

Master of Science in Software Engineering Systems

Boston, MA

Coursework: Web Design and UX, Cloud Computing, Object-Oriented Design, Advanced Algorithms

Dhirubhai Ambani Institute of Information and Communication Technology

May 2022

Bachelor of Technology in Information and Communication Technology

Gujarat, India

Coursework: Data Structures & Algorithm, Networking, Distributed Systems, Operating Systems, Machine Learning

Skills

Programming: Javascript, TypeScript, Java, Python, Shell Scripting, C, C++

Web Development: HTML, CSS, Next.js, React, Redux, Node.js, Express, RESTful APIs, React Router, i18n, PWA

Networking & Security: TCP / IP, DNS, Load Balancer, IAM, gRPC, GraphQL Security Groups, VPN

Databases & Systems: MySQL, MongoDB, PostgreSQL, Linux, Monitoring, Web Sockets

Cloud Platforms: AWS (EC2, S3, Lambda, RDS, IAM, VPC, CloudWatch), Azure, GCP

Infrastructure: Terraform, Docker, Kubernetes, Serverless, CI/CD Pipelines, Jenkins, GitHub Actions

Experience

Jaksh Enterprise | *Software Developer*

August 2022 - July 2024

- Built a full-stack web application using the MERN stack, resulting in a 35% increase in client user engagement and a 20% decrease in page load time, fully meeting client specifications within a 3-month timeline
- Led the deployment process, including domain setup and SEO optimization, driving a 40% increase in web traffic and a 30% rise in user engagement
- Optimized application performance by implementing efficient state management with Redux, lazy-loading components, and database indexing strategies, reducing API response times by 65% and improving experience

Pitney Bowes | *SDE Intern*

January 2022 – July 2022

- Spearheaded the development of the PitneyShipPro platform, automating data entry through API integration and reducing manual input by 40%, significantly improving operational efficiency
- Managed the 'Route Management' module, optimizing delivery routes and achieving a 15% reduction in delivery time. Demonstrated design expertise, enhancing project efficiency by 20% in a global context
- Improved code quality and reliability by implementing comprehensive unit testing with Jest and integration testing with Cypress, increasing test coverage to 85% and reducing production incidents by 30%

Projects

SecureScale | *AWS, Terraform, Github Actions, CI/CD, Shell Scripting,*

January 2025 - April 2025

- Reduced infrastructure deployment time by 85% by implementing Infrastructure as Code with Terraform, automating VPC networking, auto-scaling groups, load balancers, RDS databases, and S3 storage across development and production environments
- Achieved 99.9% application availability by architecting a fault-tolerant solution with multi-AZ auto-scaling groups and enhanced security through AWS KMS encryption, least-privilege IAM roles, private subnet databases, and SSL/TLS for all public endpoints
- Accelerated deployment cycles by 65% and improved operational efficiency by 40% through a CI/CD pipeline with GitHub Actions for automated testing, AMI building with Packer, and CloudWatch monitoring with custom metrics for performance optimization

GoHaul | *Next.js, TypeScript, Redux, Express, MongoDB, Docker*

October 2024 - December 2024

- Increased user engagement by 35% by developing a responsive vehicle rental platform using Next.js and React, implementing dynamic vehicle listings, search functionality with filters, and a streamlined booking process
- Engineered a RESTful backend API using Express.js and MongoDB with Domain-Driven Design principles, resulting in 30% faster query performance while implementing JWT-based authentication and role-based access controls for improved security
- Enhanced development efficiency by 40% through establishing a well-structured project architecture with reusable TypeScript components, comprehensive API documentation, and custom React hooks for state management
